(20)

タクシーに乗りなさい、さもないと彼女を永遠に失う。

Take a taxi, (① will ② you ③ see ④ or ⑤ never) her again.

Ⅳ 次の長文について、それぞれの間に番号で答えよ。

Almost 380 of the 1900 nationally listed threatened species can be found in urban areas across Australia and are facing extinction. Australia has an *abundance of unique native animals and plants, with a growing number of large and small animals under pressure from habitat loss and climate change.

The latest five-yearly State of the Environment report was released in July and found there are growing pressures on Australian wildlife from habitat loss and climate change. The report found that there are now more than 1900 species and ecological communities listed as threatened; of these, 42 critically endangered species have no protection in the National Reserve System, which is Australia's network of protected areas.

The number of Australia's threatened species has seen an 8 per cent rise since 2016. The number of plant and animal species listed as threatened in June 2021 was 1918, up from (21) in 2016. Since the release of the report, two new species have been added to the growing list of threatened animals. The mountain skink has been listed as endangered and the southeastern glossy black cockatoo has been listed as vulnerable in August.

The World Wide Fund for Nature (WWF) has released a backyard tool for everyday Australians to use to (22) save some of the endangered wildlife found in urban areas. Released on Tuesday, the new interactive tool "My Backyard" allows users to discover which threatened species live in their local area and what precautions can be taken to help protect them.

WWF-Australia chief conservation officer Rachel Lowry said people might be surprised to learn that bushland and forests near cities are (23) to some of Australia's rarest animals. "It is a fun and interactive tool that also makes it easier for people to take action, to reach out to their local MPs and call for better protection on behalf of our unique Australian wildlife," Ms. Lowry said. "Australia's native animals are under (24) pressure from climate change, habitat destruction and invasive species. But I'd also argue that our silence is impacting our threatened species because they need our voices now more than ever."
