Ⅳ 次の長文について、それぞれの間に答えよ。

Apples are one of the most popular fruits in the world. They are not only delicious but also very healthy. But where did apples come from? The origin of apples can be traced back thousands of years.

The first apples grew in Central Asia, in a region called Kazakhstan. This area is home to the wild apple tree, known as *Malus sieversii*. These wild apples are small, sour, and not very sweet like the apples we eat today. People began to gather these wild apples a very long time ago.
*¹Archaeologists found evidence that people were eating apples as far back as 6500 BC.

As people traveled and explored new places, they took apple seeds with them. This helped spread apples to other parts of the world. By 400 BC, apples were growing in ancient Greece and Rome. The Greeks and Romans enjoyed apples and wrote about them in their books. They even created many varieties of apples.

In the Middle Ages, apples became very popular in Europe. Monks in *²monasteries grew apples and made cider, a drink made from fermented apple juice. Apples were also used in cooking and baking. By the 17th century, apples were brought to North America by European settlers. They planted apple trees, and soon apples became an important part of American life.

Today, there are thousands of different apple varieties. Some apples are sweet, like Red Delicious, while others are tart. Popular types include Fuji, Gala, and Granny Smith. Apples are used in many dishes, such as pies, sauces, and salads. They are also eaten fresh as a healthy snack, which are not high in calories.

In conclusion, apples have a long history that started in Central Asia. Through exploration and trade, they spread across the world. Today, apples are loved by many people for their taste and health benefits.
